SeQureNet is a start-up company founded in April 2008 as a spin-off from the [quantum information team](#) [3] of Telecom ParisTech who was highly involved in the FP6 SECOQC Integrated Project. The domains of expertise of SeQureNet's team of scientists and engineers are network security, cryptography, quantum information and software development.

The R&D work of SeQureNet is currently focused on the development of intellectual property and software in order to bridge the gap between the theoretical unconditional QKD security and its resistance to real-world threats. It aims at developing reliable and auditable QKD-based products that are evaluated through standard weaknesses assessment methodologies.
